	Feedback for Shreya	Feedback for Anya	Feedback for Shourya	Feedback for Charles	
	The original number was inputted as an integer, but I converted it to a double before it was outputted to the user, have to make sure we convert later for operations and display integer value to users	My output for my code is a double, but the final number needs to be an integer. The original value inputted for my code is always a double. However, we need to test for integer cases as well.	Have to change the assignment depending on if the input is an integer or decimal. Also should implement the "step" procedure to make it more organized.	My output for my code is a double, but the final number needs to be an integer.
